

Instruction To Bidders

Fall Protection Wording Added To Instruction To Bidders For Steel Erection

(Company) is committed to building projects with zero injuries. All contractors and subcontractors are to comply with relevant sections of subpart M and Subpart R of the Occupational Safety and Health Act. In addition, all contractors are to enforce 100% fall protection for all employees engaged in steel erection with fall hazard exposures of 15 ft. or greater. This exposure will be measured from the top of steel to the ground or from the top of steel to top of steel. Fall protection is used when fall prevention measures cannot adequately protect the worker from fall hazards.
